Reviews Trend

Specifically, there is a dense group of points in the zone of low review volumes [ $<2K$ ], which indicates that many products are rarely discussed.

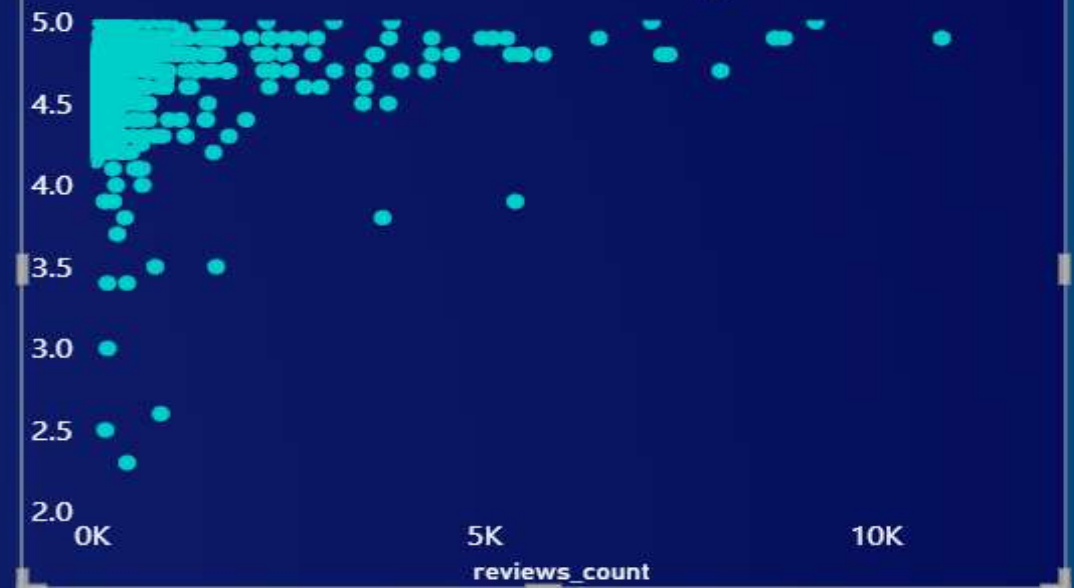

## Consistency with High Review Counts:

Products with a great number of reviews, especially if it exceeds four thousands something, are likely to have very stable only high rating - slightly above 4.5, which also means that the product is stable and popular.

## Outliers:

The few below 3.0 are likely to be products nobody wants while above 4.0 with few reviews are likely indications of quality concerns.
